

You've been made aware that your student has been labeled as a close contact to someone with COVID-19 and that quarantine is necessary:

1. Keep them home until cleared by the school.
2. Email (attendance@thefsi.us) & the school nurse (jpeckham@thefsi.us) to alert them of your student's exposure.
3. Is your student vaccinated?

YES

Provide proof of vaccination to the school. No quarantine will be necessary, but your student should self monitor for symptoms x 14 days since date of last exposure and be tested at any point symptoms develop. It's recommended to be tested 3-5 days after exposure even if vaccinated.

NO

Your student will need to quarantine and participate in virtual learning. There are three different circumstances to end quarantine and return to school. **SEE BELOW**

#1

Your student can complete a 7 day quarantine if no symptoms have developed and you can provide a negative **PCR** test taken on day 5 or later. Please provide school with proof of test result.

Please note- rapid antigen tests **are not accepted** after an exposure.

#2

Your student can complete a 10 day quarantine and return to school if no symptoms have been reported during daily self-monitoring. Please reach out to the school nurse to make them aware they have remained asymptomatic and that they are planning to return.

#3

Your student can complete a 14 day quarantine with daily self-monitoring.

If you have any questions regarding this flowchart, please contact school nurse Jessica Peckham.
